Hep2O/Acorn ranges of flexible plumbing are the ideal solution, whether you're fitting a kitchen or bathroom, changing a heating system or installing plumbing in a new property. When compared to copper systems, flexible plumbing offers many additional benefits for both the installer and the home owner.

Fast

Hep2O/Acorn is significantly quicker to fit than soldered copper or Pex systems. Pipe can be measured and cut in-situ making it easy to work with, particularly in awkward spaces. Pipe cutters provide a clean, square cut for easy jointing.

Economical

Due to the flexibility of the Hep2O/Acorn ranges, fewer joints are needed than in copper installations saving you time and cost.

Compatible

Next Generation Hep2O/Acorn ranges are fully compatible with previous (grey) version of Hep2O/Acorn and with copper pipe, so is ideal for repair, maintenance and improvement applications.

Flexible Pipe

Flexible pipe, means it can be easily 'cabled' around obstructions and through joists. Unlike some other plastic pipes on the market. Hep2O/Acorn is manufactured from Polybutylene which has a remarkable ability to remain straight when uncoiled. This makes Hep2O/Acorn easy and convenient to handle on site.
